

### The KeySure System

#### Prevent Keys from Being Handled, Duplicated or used Surreptitiously!

The KeySure Controller is a simple, pilfer-proof tamper-evident, two-part container that encapsulates individual keys. Once closed, the container must be physically broken open to access the key inside.

- Tamper Proof Key Container: Physical encapsulation prevents a key from being handled or copied.
- Signatures: Personalizes each unit for easy identification.
- Non-Electronic: Simple to use, no training required.
- Prevents False Accusations: Protects the integrity of building service employees and tenants.
- Tenant Participation: By applying signatures and having the option of visually checking on the key/container integrity
- Liability: The KeySure systems limits liability.

KeySure 1-2-3

Place key in one half of the KeySure box, then snap both halves together. The key can only be accessed by breaking open the box

### KeyController

#### Why use KeySure's Keycontroller?

When you need accountability for the possession of a key and you want to prevent a key from being used surreptitiously. It's perfect for tenants who need to leave a key with management or for leaving a key with a neighbor.
