Architectural Hardware Finish Designations

This chart lists common finishes found on builder's hardware manufactured in the United States. The first column indicates the BHMA number, the second column the old US standard number (if available) and the third column indicates the finish and base metal that the finish is applied to. Finishes which have the same name (satin chrome) may appear slightly different due to base metal differences.

The chart below lists common anodized finishes which are designated for aluminum storefronts.
