01-10-2001

To address the problems associated with MS® deadlocks and Best cylinders, Adams Rite has worked with Best to redesign the C181 cam to compensate for the play between the plug and the shell of the cylinder. This play causes the cam to slip off the internal lock-arm pin of the MS deadlock – leaving it short of fully projecting into the locked position.

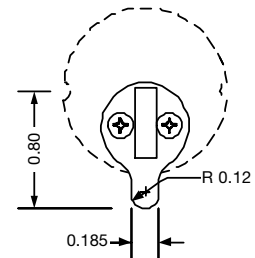

The new cams are silver-colored. Best has scrapped their existing inventory of the older brass-colored cams.

Udated Cam Charts

Below is cam data supplied by each of the listed manufacturers. Please consult with each manufacturer to ensure compatibility.

MS® CAM
